ABSTRACT

This report, based on late 1969 and 1970 photography, updates previous basic reporting on four of the major electric power plants in Honan Province, east-central China. The cut-off date for information is September 1970.

No changes were observed at any of the plants since the previous report. The status of construction at the An-yang Thermal Power Plant could not be determined because of smoke obscuring the boilerhouses.

Three of the plants were operating on the latest coverage. The San-men Hsia Hydro Power Plant did not appear to be operating.
